This Module

Installing Angular

Using the Angular-CLI

Integrating with ASP.NET Core

Using External Templates

Creating Components

Angular

Successor to AngularJS
- (e.g. Angular 1.x)

Open Source JavaScript Framework

Built-by Google for its own projects

Supplies basic app services

Rich client-side applications
- (e.g. Single Page Applications)

Leverages TypeScript (optionally)
- Google built Angular with TypeScript

Angular CLI

- pluralsight.com/courses/angular-cli

What We've Learned

Angular builds modular rich-clients

MVC but on client

Data binding in views, instead of code

Angular-CLI helps automate the process
